

Your Full Name

Your Role (e.g., .NET Backend Developer)

📍 Your City, Your Country 📞 +XX XXX XXX XXXX ✉️ youremail@example.com

🌐 linkedin.com/in/yourlinkedin 🐙 github.com/yourgithub

Summary

Motivated and detail-oriented **[Your Role or Title]** with hands-on experience in building scalable, secure, and high-performance web applications using **[Primary Framework or Technology]**. Proficient in developing and integrating **RESTful APIs**, database-driven systems, and enterprise-level backend solutions. Familiar with **[Secondary Frameworks or Technologies]** demonstrating versatility across modern development stacks. Strong foundation in **backend architecture**, **algorithms**, and **system optimization**, with a commitment to writing clean, maintainable, and efficient code.

Education

[University Name]

B.Sc. in *[Your Major]*

[Start Date] – [End Date]

[City, Country]

- **GPA:** [X.XX / 4.00] ([Grade, e.g., Very Good / Excellent])
- **Graduation Project:** [Project Title] – [Grade or Achievement]

Experience

[Company Name]

[Job Title]

[Start Date] – [End Date]

[City, Country]

- Developed and maintained backend APIs focusing on authentication, data management, and service integration.
- Built desktop or web applications integrating APIs for efficient data interaction and user interface functionality.

Projects

[Project Name – e.g., E-Commerce API] | 🐙 GitHub

- Developed a scalable API following **Clean Architecture**, **CQRS**, and the **Mediator Pattern**.
- Integrated **payment gateway**, **Redis caching**, and **JWT authentication** with refresh tokens.
- Implemented robust request validation using **Fluent Validation** and centralized error handling.
- **Tech Stack:** ASP.NET Core, Mediator, Redis, Payment Gateway, Angular, Fluent Validation, xUnit.

[Project Name – e.g., Real-Time Chat App] | 🐙 GitHub

- Built a real-time application featuring **SignalR**-based chat, presence tracking, and secure **JWT authentication**.
- Designed and optimized relational models for user interaction and real-time updates.
- **Tech Stack:** ASP.NET Core, Entity Framework, SignalR, Serilog, SQL Server, JWT.

[Project Name – e.g., Full-Stack Web Platform] | 🐙 GitHub

- Developed a full-stack web platform with **role-based authentication**, content management, and integrated payments.
- Implemented a responsive UI using **Razor Pages** and **Bootstrap 5**.
- **Tech Stack:** ASP.NET Core MVC, Razor Pages, EF Core, AutoMapper, Stripe, Bootstrap 5.

[Project Name – e.g., AI Image Generator API] | 🐙 GitHub

- Built a hybrid API integrating **ASP.NET Core** with **Flask** for text-to-image generation.
- Implemented secure authentication with **JWT** and **OAuth2 Sign-In**, along with caching via **Redis**.
- **Tech Stack:** ASP.NET Core, Flask, SQL Server, Redis, JWT, OAuth2, Fluent Validation, AutoMapper.

Skills

Backend: [Example: ASP.NET Core, Spring Boot, Node.js, Django, RESTful APIs, Microservices, Clean Architecture.]

Databases: [Example: SQL Server, MySQL, PostgreSQL, MongoDB.]

Frontend: [Example: Angular, React, Razor Pages, HTML5, CSS3, Bootstrap, JavaScript, TypeScript.]

Programming Languages: [Example: C#, Java, Python, C++, PHP, SQL, NoSQL.]

Core Concepts: [Example: Object-Oriented Programming (OOP), Data Structures, Algorithms, Design Patterns.]

Tools & Platforms: [Example: Git, GitHub, Docker, Postman, Linux, Visual Studio.]

Soft Skills: [Example: Problem Solving, Critical Thinking, Teamwork, Communication.]

Achievements

Participated in **[Competition Name]** (e.g., National Collegiate Programming Contest).

Competed in **[Hackathon or Contest Name]** (e.g., IEEE Xtreme, Google Hash Code).

Solved algorithmic and data structure problems on **[Online Judge]** (e.g., Codeforces, LeetCode, HackerRank).

Languages

- Language #1 – [Proficiency Level] (e.g., Native / Fluent / Intermediate / Beginner)
- Language #2 – [Proficiency Level]
